

## Tracking the weather

HydroPoint Data Systems and The Toro Company will co-develop and market a new generation of intelligent, weather-based irrigation controllers built on HydroPoint's patented WeatherTrak technology.

The controllers will feature HydroPoint's patented ET Everywhere Data Service and its Scheduling Engine software. This software uses landscape-specific parameters such as plant type, soil type, sun exposure, sprinkler type and slope, and calculates how to apply the right amount of water at the right time. The wireless ET (Evapotranspiration) Everywhere Data Service delivers daily weather updates to each controller, allowing the Scheduling Engine to automatically adjust watering based on actual plant needs.

## Another ET-based controller

Irritrol Systems will introduce a new evapotranspiration (ET)-based controller that uses real-time ET data to calculate the precise amount of irrigation required in each zone of a given landscape, ensuring maximum efficiency and water conservation.

Irritrol's new Smart Dial controller will incorporate patented Weather-Trak technology from HydroPoint Data Systems. In addition to the Smart Dial ET-based controller, Irritrol Systems also will offer a retrofit package compatible with its popular Rain Dial Series controllers. This will provide the hundreds of thousands of Rain Dial customers nationwide access to this highly innovative water management technology without the need to replace their entire control system.
