11/13/13

---

#### *Enhancements to WeatherTRAK Budget Manager and WeatherTRAK Site Asset Manager*

---

Products: WeatherTRAK Central's WeatherTRAK.net

---

### Summary

HydroPoint Data Systems, Inc., makers of WeatherTRAK smart irrigation control products, is pleased to announce the WeatherTRAK Central Fall 2013 Release including WeatherTRAK.net 7.9.

### Overview of WeatherTRAK.net 7.9 Release

WeatherTRAK.net 7.9 enhances the revolutionary WeatherTRAK Central service with a production release of WeatherTRAK Budget Manager™ and WeatherTRAK Site Asset Manager™ to proactively manage water budgets across your sites and accounts.

#### WeatherTRAK Budget Manager

WeatherTRAK's Budget Manager provides simple real-time visibility into a site's water consumption compared with up to three different user defined budgets.

**Site Dashboard** - Provides a graphical view of the consumption or fiscal dollars compared with up to three user defined budgets. When integrated with WeatherTRAK's flow-enabled central controllers, Budget Manager also provides daily measured and estimated usage consumption information to easily see the site's budget status. Budget Manager also provides the ability to align measured and estimated usage consumption information with either the calendar month or the associated water bill service period. This allows users to clearly compare water bill information with measured and estimated usage for tracking and auditing purposes.

**Budget Monitor** - Users can check the status of a monthly or annual budget at a glance. This interactive interface allows a user to review information by Account, Budget Type, Actual Consumption Data Source, Unit, Month and Year. Using Budget Monitor, users can see measured and estimate consumption usage aligned with either the calendar month or associated water bill service period.

**Reporting** - Budget Manager provides multiple reporting options including Water Budget Account Report and Water Budget Site Report. The Water Budget Account Report provides a graphical budget status summary for all sites in an account as well as each site's individual status. This report provides an executive summary that can easily be understood. The Water Budget Site report graphically summarizes a site's total usage across each water meter and controller giving users information that they can easily share and explain to others about an individual site. Users can select from multiple actual usage sources: Measured or Estimated Usage aligned with calendar month, or Water Bill, Measured or Estimated Usage aligned with billing period.

WeatherTRAK's Budget Manager is included as part of the WeatherTRAK Central service. No extra fees at this time.

## WeatherTRAK Site Asset Manager

**Centralized Site Information** - WeatherTRAK.net now has centralized site information and the ability to track site specific information, giving users a central repository that can be shared across multiple users. Information such as site address, landscape maintainer, and location are available. WeatherTRAK.net's Site Asset Manager also allows users to import a site image that will be used in site specific reports for visual reference.

**Irrigation Asset GIS Tracking** - Integrated interactive Google Maps enables users to track important asset specific data for a site's landscape assets including WeatherTRAK controllers and water agency water meters. WeatherTRAK.net's Site Asset Manager enables users to track an asset's GIS (Geographic Information System) location, asset status, and visualize all of a site's tracked assets using integrated, interactive Google Map.
