081412

---

Products: WeatherTRAK ET Pro<sup>2</sup> Smart Water Manager Central Series –  
12 to 48 stations  
LC Central 6-18 stations

---

**Overview**

HydroPoint Data Systems is announcing web application release 7.3. This software will be visible to all [www.weathertrak.net](http://www.weathertrak.net) users beginning Tuesday, August 14, 2012 for both ET Pro<sup>2</sup> Central and LC Central users.

**Web Application 7.3 New Features**

Web application features highlighted in software version 7.3 are:

- The ability to change depletion for any controller within a user's account from the **MANAGE page**,
- A new report called, "Controller Inventory Report" You will find it under the **Report Type "Enterprise Reports"** and can generate an inventory of each controller within a user's account to include:
  - Site Name
  - Controller Name
  - Serial Number
  - Flow Sensor Status
  - Version and Creation Date
  - Total number of stations
  - Number of stations in:
    - Auto mode
    - User w/ ET
    - User w/ No ET
    - Off
  - Current Status
  - Rain Pause, remote
  - Red Alerts
  - Open Alerts
  - Settings Analysis will show details about program settings that fall outside recommended ranges

**What do you need to do?**

Because [www.weathertrak.net](http://www.weathertrak.net) software application is internet based, no rebooting or software reloading is needed on your part. When you log in after Tuesday, August 14th, these new features will be available for immediate use.

**Need Help?**
