

# WeatherTRAK®

## Worry-free Wireless Warranty™

### Smart Irrigation, Always Connected

The Worry-free Wireless Warranty™ for WeatherTRAK® controllers is designed to ensure that the connection your irrigation system uses to receive ET weather data and system updates will always work – even as cellular technology changes.

The Worry-free Wireless Warranty helps you maximize your ROI by ensuring your WeatherTRAK controllers never require unplanned expenses or hardware upgrades due to enhancements to local cellular technology.

When a telecom provider phases out cellular technology in your area, HydroPoint will deliver new modems and antennas for the affected controllers.

You can either install the equipment yourself or work with a certified installer to ensure your irrigation system maintains its connection to the cloud.

It's standard with new controllers or add as an upgrade to WeatherTRAK LC, ET Pro3, and OptiFlow® XR controllers activated before December 2017.

### 2G, 3G, LTE, 5G... AND BEYOND

There's no reason you should need to know what cellular data technology your irrigation system uses, much less keep it up to date. The Worry-free Wireless Warranty lets you focus on irrigation, and HydroPoint ensures technology transitions are a non-issue.
