

WEB SOFTWARE RELEASE:

CB_052110

**WeatherTRAK ET Pro² Smart Water Manager Series
Web Application Release 6.0**

05/21/10

Products: WeatherTRAK ET Pro² Smart Water Manager Central Series – 12 to 48 stations

Overview

HydroPoint Data Systems is announcing web application release 6.0 focused on customer requested features that expand on our industry leading user interface and enhanced alert notifications. This software will be visible to all www.weathertrak.net users beginning Monday, May 24th, 2010.

Web Application 6.0 New Features

Web application features highlighted in software version 6.0 for WeatherTRAK ET Pro² Web users are:

- Balloon style program and station configuration information now available to provide quick reference information on Manage, Manual and Preferences pages. Users can quickly just link to the program page for faster editing
- Context-sensitive balloon style help for each alert provides faster reference and troubleshooting on Preferences and Alerts pages
- Enhanced alerts table includes severity, possible cause, possible remedy, expected controller behavior and how to resolve the alert
- Additional station level details now available on Alerts and Reports pages
- Enhancements reflected in expanded Help file
- Optimized web application and controller synchronization
- Website performance enhancements
- Increased compatibility with Internet Explorer 8
- Enhanced Firefox browser compatibility (not fully supported)

What do you need to do?

Because www.weathertrak.net software application is internet based, no rebooting or software reloading is needed on your part. When you log in after Monday, May 24th, many new features will be available for immediate use. Take a moment and preview or print the web application HELP file identifies these new changes.
