WeatherTRAK.net RELEASE

CB_100912

WeatherTRAK.net 7.4

10/09/12

Products: Flow-enabled WeatherTRAK Smart Water Manager and LC Central Controllers with firmware version 6.0 or later.

Summary

HydroPoint Data Systems, Inc., makers of WeatherTRAK, is pleased to announce the formal release of WeatherTRAK.net 7.4.

WeatherTRAK.net 7.4 expands the easy-to-use interface **on flow-enabled WeatherTRAK ET Pro2 and WeatherTRAK LC Central Controllers** by allowing users to remotely resolve station-based flow issues without driving to the site. Remote control and monitoring provides a higher level of service, reduces travel time and costs, and makes operations more efficient.

Overview

- WeatherTRAK.net 7.4 adds remote station flow management for flow-enabled WeatherTRAK ET Pro2 Central and WeatherTRAK LC Central controllers, version 6.0 and higher.
- Once station flow is setup, the WeatherTRAK controller will monitor each station's flow rate during irrigation to ensure it is within an acceptable range. WeatherTRAK.net monitors catastrophic / mainline breaks, system leaks, as well as station-specific leaks or breaks.
- With WeatherTRAK.net 7.4, a user can now remotely program or modify station-specific flow settings. Users can quickly diagnose station-specific alarms automatically generated by WeatherTRAK controllers.
- Using the real-time **Operating Status** at WeatherTRAK.net, the user can remotely turn on a station and see the flow rate. The user can then determine if a site visit is required or if the alarm was due to an anomaly.
- WeatherTRAK.net 7.4 and the new station flow management feature enables users to maximize water conservation and increase efficiency of system operations.
