02/11/13

---

#### *Remote Learned Flow, Remote Alert Clearing and WeatherTRAK Mobile only login*

---

Products: WeatherTRAK Central's WeatherTRAK.net

---

### Summary

HydroPoint Data Systems, Inc., makers of WeatherTRAK Smart Irrigation control products, is pleased to announce the formal release of WeatherTRAK Central's WeatherTRAK.net 7.6.

### Overview of WeatherTRAK.net 7.6

WeatherTRAK.net 7.6 enhances the revolutionary WeatherTRAK Central service with new time-saving remote operation and diagnostic features, security enhancements and user interface upgrades at WeatherTRAK.net.

### Remote Learned Flow

WeatherTRAK.net 7.6 adds the ability to remotely learn flow using WeatherTRAK.net from a web browser on a computer or Smartphone, iPad or tablet. WeatherTRAK.net users can learn flow on a single station, a set of stations or all stations with just a few clicks. This feature enables the benefits of station-based flow without requiring time consuming, on-site learning.

#### To find Remote Learned Flow:

- 1) The Learned Flow quick link is available on the **Program screen** under the Station Flow section.
  - a. You can also access **Manage Flow Learning** under the **More tab** in your top navigation menu bar.
- 2) Select the station / stations you want to learn and press the **Enter button** followed by the **Start Learning button**.
- 3) WeatherTRAK.net will immediately start learned flow.
- 4) The WeatherTRAK controller will store the learned flow rate and station high flow threshold automatically.

More detailed instructions are available by clicking the  help icon on the page.

### Remote Alert Clearing

WeatherTRAK.net 7.6 enables a WeatherTRAK.net user to remotely clear electrical and flow alerts on a controller from the Manage page. This can save time and truck rolls by allowing the user to perform initial diagnostics before going to the site. The user can clear any alerts then use the Controller Operating Status feature to remotely view current flow rates as if the user were in front of the controller.

**Note:** All stations electrical status is checked daily before irrigation and flow status during all irrigation cycles. Any cleared alerts will automatically be raised again if the issue still exists.

To learn more about the alert types, the causes and the remedies select the  help icon or refer to the documentation. You can access the Remote Alert clearing feature from the Manage page.

## WeatherTRAK Mobile Only Login

WeatherTRAK.net 7.6 has expanded security options which can restrict specific logins to only have access to controllers via WeatherTRAK Mobile. This allows field workers easy time savings access to perform manual irrigation for wet checks or system maintenance as well as get visibility to station specific alerts without having access to make changes from WeatherTRAK.net. To request this option, please contact HydroPoint's customer service or see the Support section below.

## WeatherTRAK.net Security Enhancements

- Enforced the minimum password length requirements to be 6 characters.
- WeatherTRAK.net will now automatically log the user out if idle more than 30 minutes.
- Users can also now automatically reset your password directly from WeatherTRAK.net.

## Upgrades to User Interface

WeatherTRAK.net 7.6 continues to add user interface enhancements including:

- Quickly find the controllers with a specific status by clicking on the Controller Status Summary Chart on the Home page to get a detailed list on the Controllers screen with drill down interface.
- Controller hardware model and firmware version are automatically determined and sent to WeatherTRAK.net every time a central-enabled controller powers up. This information is now available on the Manage screen.
- Controller microzone added to Controller Inventory Report.
- Increased readability of yes/no options on Controller Inventory Report.

The new **Controller Status Summary Chart** is located on your WeatherTRAK.net home page.

## General WeatherTRAK.net Enhancements

- Enhanced compatibility with IE 9.
- General performance enhancements.

## Support

If you experience a web page that has incorrect formatting, please hit the F5 key. This will typically resolve any issues without needing to contact Customer Service.

Please refer to the current Owner's Manuals at <http://www.weathertrak.com/support> for additional details on WeatherTRAK.net features.

For additional help, call HydroPoint Data Systems Customer Support toll-free, (800)362-8774, or send an email to [support@hydropoint.com](mailto:support@hydropoint.com).
